

**Claims**

1. An electronic device cover formed from a sheet of material dimensioned to at least partially cover an electronic device, wherein the  
5 sheet is configured to have a substantially flat configuration and a folded configuration and be bendable into the folded configuration to cover the electronic device.
2. A cover according to claim 1, wherein the cover is user bendable  
10 onto an electronic device.
3. A cover according to claim 1, wherein the cover is user replaceable onto an electronic device.
- 15 4. A cover according to claim 1, wherein the cover is in the folded configuration.
5. A cover according to claim 1, wherein the cover is in the flat configuration  
20
6. A cover according to claim 1, wherein the sheet of material is formed from a plastic.
7. A cover according to claim 1, wherein the sheet of material is  
25 formed from a metal.
8. A cover according to claim 1, wherein the sheet of material comprises metal and/or plastic.
- 30 9. A cover according to claim 1, wherein the sheet of material is bendable back on itself.

10

10. A cover according to claim 1, wherein the sheet of material is dimensioned to bridge one or more lateral edges of an electronic device.

11. A cover according to claim 1, wherein the sheet of material is  
5 dimensioned to cover a front and/or rear surface of the electronic device.

12. A cover according to claim 1, wherein the sheet of material comprises a folding line to assist the folding of the sheet into the folded configuration.

10

13. A cover according to claim 1, wherein the sheet of material comprises a holding arrangement to facilitate the holding of the cover on the device in the folded configuration.

14. A cover according to claim 1, wherein the sheet of material is  
15 printed on the inner folded surface of the cover.

15. A cover according to claim 1, wherein the sheet of material is arrangible to be folded in half.

20

16. A cover according to claim 1, wherein the sheet of material is printed to provide user readable indicia.

17. A cover according to claim 1, wherein the sheet of material  
25 comprises one or more actuators to engage with a covered user interface of an electronic device.

18. A cover according to claim 17, wherein the one or more actuators have sufficient flexibility to allow movement of the actuators in/out of the  
30 plane of the sheet.

19. A cover according to claim 17, wherein the one or more actuators actuators are raised domes.

20. A cover according to claim 1, having a reeled configuration for facilitating transport, storage, and/or packaging of the cover.

5 21. A cover according to claim 1, dimensioned and configured to cover a mobile phone.

22. A method of distributing a printed publication with a cover according to claim 1.

10

23. An electronic device arranged to receive an electronic device cover formed from a sheet of material dimensioned to at least partially cover the electronic device, wherein the sheet is configured to have a substantially flat configuration and a folded configuration and be bendable into the folded configuration to cover the electronic device.

15

24. A cover as hereinbefore described with reference to the accompanying Figure.

20 25. An electronic device as hereinbefore described with reference to the accompanying Figure.

26. A method of distributing a printed publication and a cover as hereinbefore described with reference to the accompanying Figure.

25
